Ihssane Bammad

Final-year engineering student at École Centrale de Nantes, specialized in Artificial Intelligence, seeking a 6-month internship in Generative AI and Data Science starting from the end of March 2026.

Education

École Centrale de Nantes | Engineering Degree – Artificial Intelligence **Ongoing 2025**
Courses: Advanced Python Programming, Advanced Algorithms, Probabilistic Modeling and Verification

École Centrale Casablanca | Engineering Degree – Data Science **2023 – 2025**
Courses: Machine Learning, Decision Support, Probability, Statistics, Graph Theory, Introduction to AI

Experience

AI Engineering Intern **May 2025 – Aug 2025**
National Ports Agency
Designed a complete RAG-based pipeline to develop an intelligent and personalized chatbot capable of providing relevant answers while generating analyses from large and complex reports.
- **Skills:** RAG, Prompting, LLM (LLaMA, Mistral, Grok), Qdrant, FAISS

Operator Intern **July 2024 – Aug 2024**
National Electricity Office
Developed a web application based on CNN models to automatically detect incidents on Low Voltage networks, generate reports without manual input, and facilitate collaboration among technicians.
- **Skills:** Computer Vision (CNN, CLIP), Web Development (React, backend), AI API creation, Image annotation with Roboflow

Bachelor Internship **Apr 2023 – Jun 2023**
NOMAC
Designed and developed a monitoring dashboard for the NOOR I meteorological station, providing real-time analysis and tracking of climate data.
- **Skills:** Frontend (React, Tailwind CSS), Backend (Node.js, Express.js), Database (MongoDB)

Projects and Achievements

High-stakes Project | Coca Cola and Tecpap
Developed a computer vision model based on **YOLOv8** to detect human presence in hazardous zones and automatically assess 5S scores from workstation images.

Sentiment Classification Project
Developed a sentiment classification application based on the NLP model **RoBERTa** on Amazon reviews to automatically distinguish positive and negative feedback.

Customer Churn Prediction Project
Developed a customer churn prediction model in the telecom sector using supervised machine learning models **(Logistic Regression, Random Forest, SVM, Decision Tree)** to identify at-risk customers.

Innovation Project | IDSUD Energy
Designed and developed a predictive maintenance model for the Neholight hybrid system using **Isolation Forest** and **Gradient Boosting** algorithms to detect and prevent system failures.

Scientific Project
Developed a deep learning model based on **Graph Neural Network (GNN)** to predict surface segregation in ternary alloys.

Skills and Languages

Data Science & AI: **NLP & Chatbots:** LLMs, RoBERTa, RAG, Prompting | **Machine Learning:** Random Forest, SVM, GridSearchCV | **Deep Learning:** TensorFlow, Keras, GNN, RNN | **Computer Vision:** YOLOv8, OpenCV, CNN, CLIP, Roboflow

Web Development: **Advanced Python:** Flask, REST API | **Frontend:** HTML, CSS, Tailwind, JavaScript, React | **Backend:** Node.js, Express | **Databases:** MongoDB, MySQL, BigQuery

Languages: French (C1), English (B2), Arabic (native)

Soft Skills: Teamwork, Rigor, Adaptability, Creativity, Time Management
